

Your symptoms, connected.

— START WHEN YOU'RE READY

Walk in ready to be heard.

You bring the story. Connective Corpus helps you organize it into clear, source-cited questions — so the next appointment can start somewhere new.

- **Free to start** — tell it what's been happening.
- **Private** — your story stays yours.
- **Cited** — every claim points to a real source.

— GET IN TOUCH

EMAIL hello@connectivecorpus.com

WEB connectivecorpus.com

Connective Corpus is an AI research companion. It doesn't diagnose and isn't medical advice — your doctor decides what's wrong and what to do. **If you're in crisis**, this isn't the right help: in the US, call or text **988**, or call **911** for an emergency.

Your symptoms, connected

— FOR YOU

You're not imagining it.

Your labs came back “normal.” You still feel unwell. Let's turn what you're living through into something a doctor can act on.

I'll listen first. We go at your pace.

— YOUR EXPERIENCE COUNTS

You've been paying attention all along.

Months of being tired, aching, catching everything — and pushing for answers. That isn't anxiety. That's someone who knows their own body.

"My labs are normal but I've been exhausted for months, and I keep getting sick."

On average, people in this situation see **about four doctors over roughly four years** before answers. You're not alone, and you're not exaggerating.

— WHAT YOU WALK AWAY WITH

A summary your doctor can read.

Organized by you. Every claim tied to a real source. Never a self-diagnosis.

A "normal" result doesn't always rule things out — and some immune tests simply weren't run yet.

? Worth asking your doctor: would it make sense to check ANA, CRP, ESR, and my immunoglobulins?

● NOT YET TESTED

ANA / ENA panel · Immunoglobulins · CRP · ESR

— HOW IT WORKS

Three steps, at your pace.

- 1 Listen**
Tell it what's been happening, in your own words.
- 2 Research**
It checks real medical sources and shows its work.
- 3 Reframe**
You leave with sourced questions to bring to your doctor.
