

Your symptoms, connected.

— RECOMMEND IT BEFORE THE VISIT

A better visit, on both sides of the desk.

When the fight to be believed is already settled, the appointment can be what it's meant to be — two people solving a problem together.

- **Trust** — they arrive heard, not defensive.
- **Partnership** — lived experience meets your judgment.
- **Impact** — the relationship outlasts one visit.

WEB connectivecorpus.com

Connective Corpus is an AI research companion. It does not diagnose and is not medical advice. It organizes patient-reported information into source-cited questions; you rule things in or out. Sources shown by credibility tier (T1-T5).

— FOR CLINICIANS

The relationship, connected.

When patients arrive heard and organized, the visit becomes a partnership again — not a negotiation over whether they're believed.

Your symptoms, connected

It still defers to you. Not a diagnosis.

01 · Trust

Believed first, then examined.

Patients who feel dismissed spend the visit defending their own reality. When they arrive already heard, that energy goes back into the exam — and into trusting your read.

An adversarial start is the single strongest predictor of a worse visit. Removing it is where the relationship begins. *Murray et al., 2003.*

02 · Partnership

Two kinds of expertise, one table.

The patient brings months of organized, lived detail. You bring clinical judgment. Connective Corpus makes the handoff between them clean — sourced, tiered, and honest about gaps.

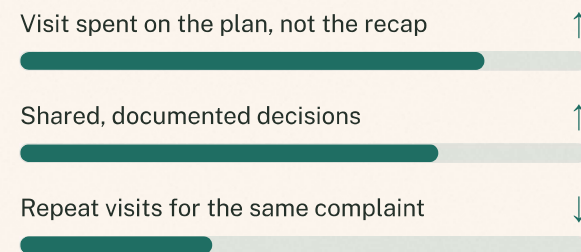

- They carry the history; you make the call.
- Questions, never conclusions, land on your desk.
- What's untested is flagged, not assumed.

03 · Impact

What changes downstream.

A visit that starts in partnership keeps paying off — fewer repeat appointments for the same unanswered complaint, and a patient who stays engaged in the plan.

Illustrative of the direction of effect when patients arrive prepared and heard.
